**Election/Restriction**

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

A. Claims 1-7 are drawn to a product which may be used in an optical recording medium, classified in Class 430, subclass 270.13.

B. Claims 8-17 are drawn to an apparatus for an optical information processing, classified in Class 369, subclass 44.11.

C. Claims 18-28 are drawn to an optical recording and reproducing method, classified in Class 369, subclass 47.1.

Inventions A and B are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the process can be used with material other than thermochromic material such simple recording material or magnetic material.

Inventions A and C are related as product and method of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the process can be used with material other than thermochromic material such simple recording material or magnetic material.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Inventions B and C are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus as claimed can be used for reading only process and does not require details for the recording at all.

Because these inventions are distinct for the reasons given above and the search required for Group B is not required for Group C, restriction for the examination purposes as indicated is proper.

2. In addition, the Applicants are also required elect a single species from whichever of the above group they elect. For group A, B or C

This group contains claims directed to the following patentably distinct species of the claimed invention:

The optical recording medium of:

- a) Fig. 1-6 [first embodiment];
- b) Fig. 7-8 [second embodiment];
- c) Fig. 9 [third embodiment].
- d) Fig. 10 [fourth embodiment].

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims are considered generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. A telephone call was made to Mr. Douglas Mueller on December 7, 2004; to request an oral election to the above restriction requirement, but did not result in an election being made.

NOTE: Mr. Mueller's office requested that a formal restriction be sent out for examination of the client.

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).

6. A shortened statutory period for response to this action is set to expire 1 (one) months and 0 (zero) days from the mail date of this letter. Failure to respond within the period for response will result in ABANDONMENT of the application (see 35 U.S.C. 133, M.P.E.P. 710.02, 710.02(b)).
